

Canvas Reminder

Have you ever miss an assignment because of you don't realize when is the deadline. If that's you, then you should try out this application!

Layout:

Features:

- Use Canvas API to get information of assignments and announcements from user's canvas account and make a to-do list from the information. Additionally, people don't have to check Canvas periodically for new information.
- The list will be split into two part. One is the assignment that is due today, and the other is the future assignments in timely order.
- It has a pin button on the top right hand corner. Once it is on the pin mode it will always show on the front of the screens.
- On the top right side, it has the announcement button, it will get the announcement from canvas. I know canvas usually send out messages on phones, but it couldn't do that on a window. If people is working on a computer, they won't miss the new announcement in the first place.
- Besides automatically adding the tasks to the list, people could also manually add the assignments to the list by press the button on the bottom right hand corner

Skill set / Libraries

- It will be a window's app
- Python
- PyQt library
- Canvas API
